

JANUARY 2021

WHY IS PHASE PROJECT SO IMPORTANT TO US

PHASE is going to develop the eHealth sector, for the benefit of every citizen in Italy, Albania and Montenegro, through innovative electronic tools and procedures. We want to propose a complete shift in the traditional paradigm of the healthcare services and start revolution that will require a change in current healthcare system.

WHAT IS E-HEALTH?

The World Health Organization (WHO) defines "e-health" as "the safe and cost-effective use of ICTs and their role in supporting health and related areas, including health care services, health monitoring, health literature, education, and knowledge. In other words, e-health is the application of information and communication technologies (ICTs) in the medical and health care sectors, including educational, research and administrative areas.

TELEMEDICINE PATIENTS AND CAREGIVERS EMPOWERMENT

One of the eHealth solutions according to Global Observatory for eHealth is Telemedicine that supports the provision of health-care services at a distance. Telemedicine can mobilize all aspects of healthcare potentials to decrease transmission of disease, conduct people to the right level of health care, ensure safety for providing health services online, protect patients, clinicians, and the community from exposure to infection, and finally diminish the burden on the healthcare providers and health system. Telemedicine enables the delivery of safe and quality care to individuals living in areas with limited access to services.

WHAT ARE WE GOING TO DO?

Phase Project is aiming to create a:

→ **PLATFORM FOR MONITORING REMOTE CHRONIC PATIENTS**

→ **PLATFORM FOR INTEGRATED CARE PATHWAYS IN NEURODEGENERATIVE DISEASES**

→ **HEART ATTACK SUPPORT PLATFORM THROUGH INFARCT.NET**
